

|||| RoadBotics AI ||||

RoadBotics uses AI to track the age of roads and map them out.

To track the roads and their age, RoadBotics hires Data engineers who go out and record how the roads look (potholes, cracks).

← This AI can allow for easier rebuilding of roads and may have more features added in the future.

This allows for better road construction and less crashes and car damage because of potholes and cracks. Less accidents.
